

A woman with dark, wavy hair and a pearl earring is shown in profile, holding several rectangular samples of laminate flooring. The samples display various wood-grain patterns in shades of brown, tan, and grey. The background is a deep purple with a repeating damask pattern.

**LAMINATE FLOORING  
ASSEMBLY SYSTEM,  
NEW GENERATION.**

436 Alpaca oak

**FAST**  
**PRECISE**  
**SIMPLE**

**Zip'n'go**, is a assembly system for laminate flooring, developed by Alsapan flooring. It simplifies assembly of the short side of the planks by simply locking the planks together. **Zip'n'go** is precise, reversible and requires no effort.

# Why zip'n'go?

We continually gather feedback from our customers for the ongoing improvement of our assembly system and **Zip'n'go** is the culmination of many years R&D. Our main focus is on:

- providing answers for the installation issues met by our customers,
- delivering innovative solutions for easier and faster assembly,
- improving the quality and precision of assembly.

The **Zip'n'go** system is designed to allow simple, safe and fast flooring installation. It offers a number of advantages, both during assembly and in the longer term.

## How does it work?

Flooring installation has never been simpler with the **Zip'n'go** system. A couple of basic techniques is all that's needed.

1

Slot in the short side.

2

Pull out the tongue.

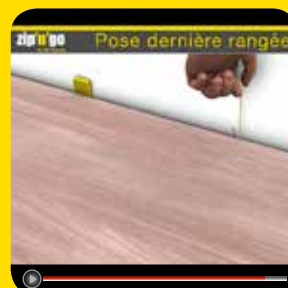

3

That's all there is to it !

## Watch the video

Use your PC, smart phone or tablet to watch an online video that takes you through all the stages of the assembly process, from preparing the room, right up to laying the final plank.

To watch the video, click on the URL/ [www.alsafloor.com](http://www.alsafloor.com)

# ALSAFLOOR

## Made in France, in Alsace

ALSAFLOOR products are symbolic of our drive to design the best products and offer the best service to our customers, with world-renowned French quality and expertise - the guarantee of compliance with social and environmental standards.

### **Alsapan flooring: an ecologically-responsible company**

All Alsapan flooring products are PEFC certified. The wood used in our flooring is sourced from sustainably-managed forests - we never use exotic woods or wood from tropical forests. Our production facility is geographically close to our raw material suppliers and retail outlets, which allows us to reduce shipping distances and CO2 emissions.

Our Marlenheim facility is exemplary in its environmentally-responsible actions, which help maintain our planet's natural resources. Its roof is fitted with solar panels, employees are actively seeking to reduce paper consumption, while the plant uses production waste products as an energy source for heating the buildings and the machines.

### **A+, for a healthy habitat!**

Introduced on 1 January 2012, the health safety labelling on product packaging gives consumers details of the amount of volatile substances released into the interior air by flooring and is ranked on a scale from Class A+ (very low emissions) to Class C (high level of emissions).

ALSAFLOOR is ranked A+, with a formaldehyde emission rate of under 10 µg/(m² x h), based on tests performed by an independent laboratory.

\*Information as to emissions of volatile compounds in the indoor air, which might be harmful to the health when inhaled, on a scale from Class A+ (very low emissions) to C (high emissions).

### **(e)CO2 programme, carbon compensation for shipping waste products.**

Alsapan flooring is part of the French-based e(CO2) program, which sets out to compensate CO2 emissions resulting from shipping its waste products, by providing support for a reforestation project in Peru. The program helps set up environmental, economic and social projects to protect biodiversity and provide sustainable revenue for the people living in affected forestland.

**You too can help protect nature  
and the ecosystem,** by preferring products  
from the sole French producer of laminate  
flooring.
